**PRODUCT INFORMATION**

Contents: Anti-mPD-1-mlgG1e3 InvivoFit™, purified monoclonal antibody (mAb), provided azide-free and lyophilized. It is available in two pack sizes:
- 1 mg
- 2 x 5 mg

Target: Murine programmed cell death 1 (mPD-1)
Clone: RMP1-14-derived
Source: Chinese hamster ovary (CHO) cells
Sequence: ~85% murine (constant region) and ~15% rat (variable region)
Light chain type: Kappa
Purification: Affinity chromatography with protein A
Formulation: 0.2 μm filtered solution in 150 mM sodium chloride, 20 mM sodium phosphate buffer with 5% saccharose

*Antibody resuspension (2 mg/ml)*

**Note:** Ensure you see the lyophilized pellet before resuspension.

Resuspend Anti-mPD-1-mlgG1e3 InvivoFit with sterile water:
- Add 500 μl to 1 mg
- Add 2.5 ml to 5 mg

*Storage and stability*

Product is shipped at room temperature. Store lyophilized antibody at ‑20 °C. Avoid repeated freeze-thaw cycles.

*Quality control*

- Binding of Anti-mPD-1-mlgG1e3 InvivoFit™ to mPD-1 has been confirmed using flow cytometry.
- The complete sequence of this antibody has been verified.
- <5% aggregates (confirmed by size exclusion chromatography).
- Anti-mPD1-mlgG1e3 InvivoFit™ is guaranteed sterile and its endotoxin level is <1 EU/mg (determined by the LAL assay).

*Background*

Programmed cell death 1 (PD-1; also known as CD279) is a type I transmembrane protein expressed at the cell surface of activated and exhausted conventional T cells1. PD-1 is an inhibitory immune checkpoint that prevents T-cell overstimulation and host damage. PD-1 interaction with its ligands PD-L1 (programmed cell death ligand 1) or PD-L2 induces inhibition of T-cell receptor signaling1. Blockade of PD-1 with mAbs has allowed unprecedented remissions in patients with metastatic melanoma or non-small cell lung cancer1.

**DESCRIPTION**

Anti-mPD-1-mlgG1e3 InvivoFit™ is a recombinant mAb designed for in vivo studies in mice. It features the variable region of the previously described anti-mPD-1 RMP1-14 mAb2 and the engineered murine IgG1e3 constant region. The RMP1-14 mAb targets and blocks mPD-1 antigen2. However, the RMP1-14 mAb, along with other commercially available anti-mPD-1 mAbs, were generated in rats, and are therefore immunogenic in mice. Additionally, these mAbs feature the IgG2a isotype which promotes antibody-dependent cellular cytotoxicity. To overcome these two issues, InvivoGen offers a mouse anti-mouse mAb (non-immunogenic) featuring an isotype devoid of effector function. Anti-mPD-1-mlgG1e3 InvivoFit™ was generated by recombinant DNA technology so that it is ~85% murine (constant region) and with a point mutation D265A (a replacement of aspartic acid by alanine at position 265), resulting in the complete loss of cytolytic effector function2. Anti-mPD-1-mlgG1e3 InvivoFit™ is thus ideal for blocking the mPD-1 receptor without causing T cell depletion.

This antibody is produced in CHO cells and purified by affinity chromatography with protein A.
